Faiq Ahmed Siddique

Odoo Developer · Python & Full-Stack Web Developer

Lahore, Punjab, Pakistan | +92 334 2445570 | faiqahmad1548@gmail.com

PROFESSIONAL SUMMARY

Odoo Developer with **8 months of professional experience** building and maintaining custom **Odoo 19** modules for a production ERP covering HR, time off, expenses, timesheets and project management, now expanding into accounting. Skilled in Python, the Odoo ORM, OWL/JavaScript, QWeb/XML views and PostgreSQL, with a Computer Science degree and a full-stack background in React.js and FastAPI. Experienced in taking features from requirements through security design, testing and deployment, and focused on writing maintainable code that solves real business problems.

PROFESSIONAL EXPERIENCE

Odoo Developer

March 2026 – Present (8 months)

Excellence Delivered (Pvt.) Ltd (ExD)

Lahore, Pakistan

- Develop and maintain a suite of **15+ custom Odoo 19 modules** powering the company's internal ERP across HR, attendance, timesheets, project allocation, expenses and reporting.
- Built a **two-stage timesheet approval workflow** with a daily grid entry view, expected-hours calculation, holiday timesheet support, submission validation and automated compliance reminders.
- Designed the **employee project-allocation** module and **role-based access control** using security groups and record rules, so employees only see the projects and tasks assigned to them.
- Developed interactive **OWL dashboards** (BI, project & task, and employee dashboards) backed by Python controllers and JSON endpoints for real-time operational reporting.
- Built **My Workspace**, a personal employee portal that brings approvals, notifications, tasks, time, time off, expenses, resume and HR profile into one screen.
- Extended **Time Off** with the company leave policy: yearly quotas on a July–June leave year, pro-rata allocation for joiners, capped carry-forward, sandwich rule, recall from leave and notice-period restrictions.
- Developed an **Expenses & flexi-benefit claims** module with a configurable, multi-step approval chain routed by department and location.
- Added a **Gantt view** and WBS outline ordering to the Project app for planning and scheduling work.
- Built a secure **user proxy (sign-in-as)** feature that lets authorised staff view the system with another user's exact access to troubleshoot issues.
- Integrated a **project/task timer with idle detection**, audible alerts and desktop notifications, and hardened it against failure modes found in production.
- Integrated an **external attendance API** with Odoo HR and built team-management, delegation and organization-hierarchy features for managers.
- Created a shared **design-token theme with dark mode** and a custom home menu (SCSS, OWL, QWeb), giving all ExD apps a consistent, modern interface.
- Wrote automated tests with Odoo's test framework, used a Git-based branching workflow, and deployed and upgraded modules on the company UAT server.
- Currently developing **custom Accounting modules** to extend the ERP into finance operations.

PROJECTS

Automatic Attendance System – Face Recognition

Final Year Project

React.js · FastAPI (Python) · PostgreSQL · face_recognition

- Built a system that lets educational institutes record attendance automatically by identifying students through facial recognition, with no manual input.
- Developed a REST API in **FastAPI** and a component-based **React.js** interface for administrators, faculty and students.
- Designed a **PostgreSQL** schema to store student records, facial encodings and attendance logs securely.

E-Store – Online Shopping Platform Semester Project

HTML · CSS · Bootstrap · JavaScript · Node.js · SQL Server

- Developed a responsive web store for buying and selling products, using Bootstrap's grid and components for a consistent experience across devices.
- Implemented client-side form validation and dynamic content loading in JavaScript, and an asynchronous **Node.js** back end.
- Modelled products, users and transactions in **SQL Server**.

TECHNICAL SKILLS

ERP / Odoo	Odoo 19 module development, ORM, OWL framework, QWeb & XML views, security groups & record rules, controllers, wizards, scheduled actions, mail templates, Gantt views, Time Off, Expenses, Accounting
Languages	Python, JavaScript (ES6+), C++, SQL
Frameworks & Libraries	React.js, FastAPI, Node.js, Bootstrap, face_recognition
Front End	HTML5, CSS3, SCSS, responsive design
Databases	PostgreSQL, SQL Server
Tools	Git, GitHub, Visual Studio Code, Visual Studio

EDUCATION

Bachelor of Science in Computer Science 2020 – 2025

National College of Business Administration & Economics (NCBA&E), Lahore CGPA: 3.5 / 4.0

Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Software Engineering, Web Development.
